

Interfering Station Role

This role is ONLY for exercise use! Please, never actually do this Over The Air (OTA)

Role of the Interfering Station:

You will simulate interference, either intentional or unintentional, to disrupt the net. The NCO and participants must respond calmly and follow procedures.

Guidelines for Your Role:

Start With Mild Interference: Simulate unintentional interference (e.g., accidentally transmitting on the wrong frequency, or poor microphone handling).

Escalate if Directed: If instructed by the facilitator, escalate interference (e.g., longer transmissions, unmodulated carrier).

Be Prepared for a Response: The NCO should address you diplomatically. Once you've disrupted the net, allow them to resolve the issue.
